THOMAS SAMADY

London, United Kingdom | 07543 701711 | tomsamady@icloud.com | LinkedIn | Github | Portfolio

PROFILE

Year two BSc Computer Science student at the University of Surrey seeking a 2027 - 2028 software engineering placement. Combining 12 months of IT internship experience with independently developed software, including a deployed Java web application and a multithreaded CPU scheduling simulator. Skilled in Java, Spring Boot, Python and SQL.

EDUCATION

University of Surrey - BSc Computer Science | 2025 - 2029

- First-year result: 2:1 (Upper Second-Class)
- Industrial placement year: 2027 - 2028

ACS International School Cobham - International Baccalaureate Diploma | 2025

- 34/45 points; Business Management - 6 | Mathematics AA - 6 | Computer Science - 5

SKILLS

- **Languages:** Java, Python, TypeScript, JavaScript, SQL, HTML, CSS
- **Frameworks & Testing:** Spring Boot, JUnit, React, React Globe.GL
- **Databases:** PostgreSQL, SQLite, Microsoft Access
- **Tools & Systems:** Git, GitHub, Docker, Linux, Railway, Servers, AI, Vite

EXPERIENCE

IT Technician Intern - CNM Estates, New Malden | Jan - Dec 2023

- Contributed to improvements in website features and front-end such as fixing major bugs in UI.
- Managed internal intranet resources, including a re-organisation of a major file system.
- Worked with Microsoft Access databases and supported workplace networking and technical troubleshooting. Also maintained workplace hardware & systems.

PROJECTS

Full-Stack URL Shortening Application - Independent Project | Deployed

- ***Java - Spring Boot - PostgreSQL - Spring Data JPA - Flyway - Docker - Railway***
- Engineered a full-stack URL shortener with persistent URL mappings, custom aliases, input validation and duplicate detection.
- Implemented click tracking and statistics, managed schema migrations with Flyway, and containerised and deployed the application using Docker and Railway.

CPU Scheduling Simulator - Individual University Project | 70%

- ***Java - Python - Multithreading - Operating Systems***
- Implemented FCFS, Round Robin and priority-based scheduling with CPU and dispatcher threads, process control blocks and ready/job queues.
- Integrated Python process execution from Java using ProcessBuilder, with process state transitions, execution-time tracking, event logs and automated/manual testing.

Ongoing

- Proxmox server with 24/7 AI monitoring, Live Data 3D Interactive Globe (see Git and/or Portfolio)
- Integration of AI into various software such as blender, obsidian and aiding project workflow

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

- Computer Science Study Club Leader → ACS International School Cobham
- Rugby → ACS International School Cobham
